

PUSH-OFF BUCKET

PATENT PENDING

Infinitely improve your skid steer attachments with this innovative ejector bucket!

- **So Long Shaking** – Make shaking sticky materials from your bucket a thing of the past along with the wear and tear on your machine from dumping dense material
- **Reaching Higher Heights** – Increase your usual dump height by 3 feet to build taller piles or reach taller trailers without the risk of sidewall damage
- **Extending Your Reach** – Add up to 4 feet on your dump reach for a better material placement or balanced loading when reaching the middle of trailers
- **Flawless Controlled Motions** – Speed your dump cycle to a nearly instant dump of less than 2 seconds or slow down with feathered motions for accurate unloading
- **Self-Cleaning Extractor Blade** – Don't worry about getting materials stuck behind the hydraulically powered blade, the adjustable seal scrapes and removes material in the back of the bucket

Applications:

- **Move High Volumes in Minimal Time** – Shave time off your project by moving materials faster and easier than with a traditional bucket
- **Dislodge Dense Materials** – Clay, compost, dry dirt, mud, sand, and snow can be forced out of the bucket instantly without any damage to your machine, materials or bucket
- **Precise Placements** – Move materials close to structures or plants with ease and accuracy or fill-in trenches without the need to ever tip your bucket
- **Smooth Controls for Saving Time** – Easy to operate, hydraulic controls power the patent-pending bucket to decrease the time spent on dirt work or material movements
