

FUEL TRAILERS

**BRING FUEL TO YOUR EQUIPMENT,
NOT YOUR EQUIPMENT TO FUEL**

Standard Features:

- **Efficiency & Profitability** – Bring fuel to your equipment, not your equipment to fuel. Trailers are equipped with quality pumps and durable construction to be dependable year after year
- **Dual Platforms** – With front and rear work platforms, trailers have ultimate accessibility to the tank as well as room to haul a utility box, air compressor, generator or other ancillary equipment
- **DOT Compliant** – Fuel Trailers are assembled with electric brakes, tail lights, running lights, and safety markings allowing them to be driven off the lot and get straight to work
- **Independent Features** – Fenders and tanks are independent and bolted on the trailer frame creating the ability to change sizes or add features as an operation grows and changes
- **Rubber Torsion Axles** – Our suspension minimizes road bounce while traveling full or empty, protecting your investment from unnecessary fatigue.
- **Long-lasting Finish** – Baked at 400° and thoroughly inspected, our finish is up to withstand harsh conditions. Custom color options are available.
- **Overbuilt to Outlast** – Double welded, certified US Prime Steel, and inspected against high quality standards ensures our fuel cart will keep your machinery fleet running for years.
- **Full-Width Baffles** – Each tank has dual baffles running the complete width of the tank to minimize fuel sloshing and improve the trailer ride across rough terrain
